

**INCIDENT MANAGEMENT SITUATION REPORT
 MONDAY JUNE 6, 2005 – 0530 MDT
 NATIONAL PREPAREDNESS LEVEL 1**

CURRENT SITUATION:

Initial attack activity was light nationally with 88 new fires reported. Three new large fires were reported, one each in the Eastern Great Basin, Northern California, and the Southern Areas. Three large fires were contained, one each in the Western Great Basin, Eastern Great Basin, Southern California Areas. Very high to extreme fire indices were reported in Arizona, Nevada, New Mexico and Kansas.

WESTERN GREAT BASIN AREA INCIDENTS / LARGE FIRES:

AIR FORCE, Las Vegas Field Office. A Type 2 Incident Management Team (Brunner) is assigned. This fire is at Nellis Air Force Base, NV in brush. Rapid rates of spread and high winds are hampering containment efforts. Extreme fire behavior was reported.

SUMMIT, Ely Field Office. This fire is 70 miles northeast of Las Vegas, NV in sagebrush. Air turbulence temporarily shut down air operations. Backing fire with uphill runs was observed.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD
AIR FORCE	NV	LVD	10,000	5	6/9	167	6	6	2	0	NR

IAN	NV	ELD	6,000	100	---	88	3	2	0	0	NR

EASTERN GREAT BASIN AREA INCIDENTS / LARGE FIRES:

RED CLIFFS, Cedar City Field Office. This fire is nine miles north of St. George, UT in grass. A campground was evacuated. Desert tortoise habitat and recreation areas are threatened. High winds, running, and spotting were reported.

NORTH GORGE, Cedar City Field Office. This fire is eight miles west of St. George, UT in grass. Powerlines and wildlife habitat remain threatened.

POWERLINE 2, Cedar City Field Office. This fire is seven miles west of St. George, UT in brush and hardwood slash. Wildlife habitat remains threatened. No further information was received.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD

SW UTAH HILL	UT	CCD	990	100	---	90	3	3	1	0	100K

SOUTHWEST AREA INCIDENTS / LARGE FIRES:

BULL, Gila National Forest. This lightning-caused Wildland Fire Use (WFU) incident, located 25 miles east of Willow Creek, NM in brush and timber, is being managed to accomplish resource objectives. Moderate fire behavior with creeping ground fire and occasional torching was reported. This will be the last narrative report unless significant activity occurs.

FORK, Gila National Forest. This lightning-caused Wildland Fire Use (WFU) incident, located 13 miles southeast of Reserve, NM in timber and grass, is being managed to accomplish resource objectives. This will be the last narrative report unless significant activity occurs.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD

SOUTHERN AREA INCIDENTS / LARGE FIRES:

PANTHER POINT, Matagorda National Wildlife Refuge. This fire is on the island of Matagorda, 13 miles south of Seadrift, TX in grass. The fire is creeping. No new information was received.

UNIT 4-05-01, Sabine National Wildlife Refuge. This fire is seven miles south of Hackberry, LA in grass. No new information was reported. This will be the last report unless new information is received.

OUTLOOK:

Fire Weather Watch: In effect below 6,000 feet elevation for Monday afternoon and evening for southern Nevada due to strong southwest winds and low relative humidity.

Weather Discussion: A deep trough of low pressure will slowly move into the Pacific Northwest and Great Basin bringing unsettled weather to the Northwest and Northern Rockies along with dry and windy conditions to parts of the Southwest and southern Great Basin. In Alaska, an area of low pressure over the Gulf of Alaska and another over the Aleutians along with a weak surface trough stretching across the interior will continue to be the focus for unsettled weather.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
Western Great Basin Partly sunny, cooler and breezy across the north with isolated to scattered showers and thunderstorms. Mostly sunny, cooler and windy across the south.	North Valleys: 55 to 75 South Valleys: 75 to 90 Mountains: 45 to 65	North Valleys: 17 to 42% South Valleys: 7 to 17% Mountains: 15 to 45%	West to southwest at 10 to 25 mph with localized gusts to 35mph.
Northern California Partly cloudy northern 2/3s with scattered showers and isolated afternoon thunderstorms in the mountains.	Coast and Mountains: 50s and 60s Inland valleys: 70s.	25 to 40% inland and above 50% elsewhere.	SW to NW 7 to 15 mph with gusts to 27 mph.
Southwest Becoming windy, otherwise mostly sunny and dry.	60 to 80 mountains. 80 to 95 lower elevations.	10 to 25%, except 30 to 45% eastern NM / western TX.	SW 15 to 30 mph northern AZ SW 10 to 20 mph remainder of AZ; SW 10 to 25 mph NM S to SE at 10 to 20 mph eastern NM / western TX.

HEAT DISORDERS

Heat becomes a problem when humidity, air temperature, and radiant heat combine with hard work to raise body temperature beyond safe limits. Sweat is your main defense. Everyone on the fireline must understand the importance of drinking water often.

- High heat stress can produce three forms of heat related illness:
 - Heat cramps
 - Heat exhaustion
 - Heat stroke

- The mildest is heat cramps. Heat cramps can progress to heat exhaustion and eventually heat stroke.
- Heat cramps are involuntary muscle contractions, typically in the large muscle groups, caused by failure to replace fluids or electrolytes, such as sodium and potassium.
 - Cramps can be relieved with stretching and by replacing fluids and electrolytes.
 - Heat cramps can be prevented by maintaining an adequate intake of water, electrolyte replacement drinks and by eating fresh fruits and vegetables.

- Heat exhaustion is characterized by:
 - Weakness
 - Extreme fatigue
 - Nausea
 - Headaches
 - Wet, clammy skin

- Heat exhaustion results when the body produces more heat that it can dissipate. Inadequate fluid intake is a major contributing factor. Treat heat exhaustion by resting in a cool environment, by removing clothing so that one's sweat can evaporate, and by replacing fluids and electrolytes.
- Heat stroke is caused by failure of the body's heat controls. Sweating stops and the body temperature rises.
- Although classic teaching describes a heat stroke patient as "hot and dry", recent studies have shown that over 50% of heat stroke patients are sweating heavily. Typically, on the fireline we do not have medical thermometers. Therefore, the hallmark of heat stroke is altered mental status. You should suspect heat stroke if a firefighter is hot, fatigued, and shows some altered mental status, such as inability to remember the day or the current situation. They may ask, "Where am I?"
- Heat stroke is characterized by:
 - Hot, often dry skin
 - Body temperature above 105.8 degrees Fahrenheit
 - Mental confusion
 - Loss of consciousness, convulsions, or even coma

- Heat stroke is a medical emergency. Brain damage and death may result if treatment is delayed. Begin rapid cooling with ice or cold water, fanning the victim to promote evaporation. For rapid cooling, partially submerge the victim's body in cool water. Treat for shock if necessary. Provide oxygen if it is available. Whereas heat cramps and heat exhaustion may be treated locally, heat stroke patients should be medivaced off the line ASAP, by air if possible, as their condition may worsen suddenly.
- You can prevent the serious consequences of heat disorders by improving your level of fitness and becoming acclimated to the heat. Maintaining a high level of aerobic fitness is one of the best ways to protect against heat stress. The fit worker has a well-developed circulatory system and increased blood volume. Both are important to regulate body temperature. Fit workers start to sweat sooner, so they work with a lower heart rate and body temperature. They adjust to the heat twice as fast as the unfit worker.
